TITLE: Photopolymerisable unsatd. ester mixture - with good adhesion to metal substrates  
contains acrylic polymer as adhesion promoter

PATENT-ASSIGNEE: CONTINENTAL CAN CO[CONC]

ABSTRACTED-PUB-NO: DE 2610437A

BASIC-ABSTRACT:

A photopolymerisable mixture, esp. for coatings, comprises a mixture of ethylenically unsatd. esters and a carboxy polymer as adhesion promoter, pref. with a carboxy content 1-10 wt.%, and derived from 3-6C ethylenically unsatd. carboxylic acid, and a alkyl ester of acrylic and/or methacrylic acid, the carboxy polymer being selected from polymers of ethylhexyl acrylate-butyl acrylate-acrylic acid, ethyl hexyl acrylate-ethyl methacrylate-acrylic acid, and ethyl methacrylate-butyl methacrylate-methacrylic acid. The coatings have improved adhesion to metal substrates, and is suitable for drying and hardening with UV-light. Coating mixture has good flow and film-forming props. Can be used for roller coating of metal food containers made from aluminium, tinned steel, and non-tinned steel.
